Hi, Tom,
Please add my name to the epid workgroup email list. Although I have received earlier messages, somehow my name wasn't included on the 02Dec email reminder. Also, please forward any other papers circulated to the group. Thanks, Cheryl

Subject: Re: Epi group meeting and journal club

At our last meeting we discussed examples of using externally generate exposure estimates in studies.

I mentioned a formaldehyde study in which embalmers' next of kin were interviewed about potential activity related to exposure and then the investigators set up a controlled environment and attempted to replicate the exposures from the interview and measured the resulting exposure.

Here is that paper by Hauptmann et al. 2009

[attachment "Hauptmann 2009 LHC & brain cancer in embalmers.pdf" deleted by Cheryl Scott/DC/USEPA/US]

I also set up a folder on the NCEA hard drive called:

L:\Lab\NCEA\Epidemiology Work Group\Examples of using external surrogate exposure estimates

Hi everyone-

Just a reminder that we will be having our epi group meeting and journal club on Tuesday, Dec 7 at 1:00. Location and call-in info are below: Please let me know if you need a copy of the discussion article ("Risk estimation for carcinogens based on epidemiological data: A structured approach, illustrated by an example on chromium" by Goldbohm et al).

thanks;
Krista
